M/F Spay/Neuter ☐

Brain abd. warm.
 5mm black
 @ dorsal lat. shunt

①: ② Stage I Dent. Dz., crown wear.
 ⑨ ③ Stifle effusion, (-) sit test, symmetric
 HL gait. ⑩ ~~Color~~ de. Generalized partial
 alopecia - majority of trunk. ⑪ crown. ald
 mammary thickened w/ brown translucent
 liquid expressible from areol. & nipple.
 ⑫ 5mm sl. raised black round cutan. mass.
 ⑬ dorsolat. lumbar.
 Sedated ortho exam: Mild ↑ laxity, (-) cranial drawer @ stifle.
 X-rays: Mild effusion & DDD of @ stifle
 only. * Confirmed by Dr. Detweiler, DVM, R *

A: Dent. Dz. Crown wear
 Partial @ CLR
 Color dilution alopecia
 n/o mastitis vs. neoplasia
 Cutan. mass

P: Sedation w/ Dexdom/ Torb - See Anesth.
 Record. X-rays - stifles & hips
 TIO - Gave above findings - discussed
 SX for partial CLR'S and pros/cons.
 Rec. TTA or TPLA for p as well as
 + recovery time. I will discuss w/
 wife and respond. In meantime -
 no high impact activity.

254

11.3.20 - TIO: p did not have a very good
 night. Very groggy; having diarrhea.
 Seems to be favoring the leg more today.
 o gave Carprofen & Gabapentin this am.
 Let o know she was very anxious while
 here, so she may have developed a colitis
 from stress. o will monitor & call if
 she gets worse. mo

Date

Service

12/15/20 TFO - Reviewed Dr. Dabwiler's
review of X-rays: Concurs w/ mine.
Suggestive of cruciate injury. Also
discussed all 3 SX options and
why TFO or TTA is better for P.
If able to afford using a specialist,
encouraged him to do so.
